

DURAFLOW – Inspection and Maintenance

A qualified service and maintenance operator must perform a service on an annual basis. UK Safety Products/ Flameskill are a 3M Scott service centre for Duraflow and Proflow powered respirators.

Regular and scheduled maintenance is essential for safe use of the equipment. As well as the pre-operational and storage checks, check the PAPR on a monthly basis, and replace any defective parts.

Inspect filter gaskets on a regular basis or replace when they become worn or damaged.

Perform a regular monthly maintenance schedule in accordance with the pre-operational checks that includes a thorough visual inspection of all components. Perform a thorough inspection of all component parts before and after each use.
